

Nix for macOS... and NixOS... in one flake

it has changed how I use my machines

Manageable things on macOS

- Packages from nixpkgs
- Homebrew taps, brew, and casks
- Mac App Store packages via mas
- Terraform version(s)
- Home Manager stuff
- Secrets

Things that don't work on macOS

- GUI apps from nixpkgs
 - Not under /Applications which breaks stuff

Extra bits for NixOS

- Flatpaks
- Even more packages
- Drive partitioning

Making the flake simpler

- Break bits of the flake out into a lib folder
